```

Recovery Point Objective (RPO)	Strict
IL7 Continuity Exercise	Required

OVERALL ASSESSMENT – IL7
Concentration of critical IL7 workloads within limited commercial provider ecosystems and unmanaged external dependencies creates unacceptable operational and national-security risk. Sovereign alternatives, continuous machine-readable evidence, and hardware-rooted attestation are mandatory.

IMMEDIATE PRIORITY
Eliminate single-provider dependency, complete external-call quarantine, enforce zero-trust + continuous evidence, and operationalize Deadman / panic seal within 90 days.

GATEONE PQC ATTESTATION – IL7
Algorithm: **ML-DSA-87 (Dilithium5)** – NIST FIPS 204
Security Level: Category 5 (≈256-bit classical / 192-bit quantum resistant)
Merkle Root (SHA-512): [to be sealed]
Timestamp: 2026-07-23
Node ID: Sovereignty-One-IL7-Report-2026
Signature Status: PENDING FINAL SEAL (ML-DSA-87)
This report is suitable for DoD-IL7 / high-assurance review. Full Merkle-chained scarlog and TPM quote available upon request via GateOne Enclave.
